

# **Performance evaluation of rice varieties grown under puddled transplanted and System of Rice Intensification(SRI )**

**S.S.Parihar, B.C.Barah, Ravinder Kaur, Radha Prasanna, Niveta Jain, Manoj Khanna, Pankaj, Dinesh Kumar, Subhash Chandra and Bishan Dev**

**Water Technology Centre  
Indian Agricultural Research Institute  
New Delhi-110012**

## Treatments Detail:

### (A) Planting method:

- Puddled transplanted-P1
- Puddled SRI-P2

### (B) Varieties:

- Pusa44
- Pusa834
- Pusa1401
- Pusa1509
- PRH10

Design : Split-plot

Replication: 3

## ***Essential steps:***

- ***Seed rate 6 kg/ha***
- ***Sowing of healthy & treated seed on raised bed nursery***
- ***Use of organic manure***
- ***Transplant single young (12-14 days) seedling per hill***
- ***Spacing in square fashion (25 x 25cm) giving 16 hills/m<sup>2</sup> plant***
- ***Inter culture operation through conoweeder***
- ***Thin layer of submergence along with wetting and drying***

## SEED TREATMENT

- i) Selecting quality seed using Brine method
- ii) seed Inoculation with *Pseudomonas florescence* (bio inoculant)

Selection seed: Brine method

Seed Inoculation

Seed quality check

# Nursery bed preparation and Sowing

**Nursery bed ready**

**Compost application**

**Nursery Sowing**

**Protecting nursery with net**

**MULching nursery**

# Water flow measurement using Starflow meter

# Experimental Layout Design (Split-plot)

**Comparison of SRI with conventional experiment in Paddy 2013**

Performance Evaluation of IARI paddy varieties grown under puddle transplanting and System of Rice Intensification (SRI)

| Varieties    | Plot size  | Date of Nursery | Date of Harvesting   |
|--------------|--|-----------------|----------------------|
| 1. Pusa 44   | Expt. 1: 3x5m=15m <sup>2</sup>                       | 17/6            | 07/7 (two varieties) |
| 2. Pusa 834  | Expt. 2: 4x4m=16m <sup>2</sup>                       | 10/7            | 28/7 (two varieties) |
| 3. Pusa 1401 | Expt. 3: 3x3.5m=10m <sup>2</sup><br>(100 Amphibious) | 10/7            | 25/7                 |
| 4. Pusa 1509 |  |                 |                      |
| 5. PR-10-10  |  |                 |                      |

Spacing : SRI 25 x 25 cm, Conventional expt. 20 x 15 cm

\* , index of photosynthetic biomass; # Index of biological nitrogen fixation; values in **bold** font are the two highest values; **red colored font** values are significantly higher in terms of mode of cultivation

(Transplanting done on 23rd July and sampling on 25<sup>th</sup> Sept.)

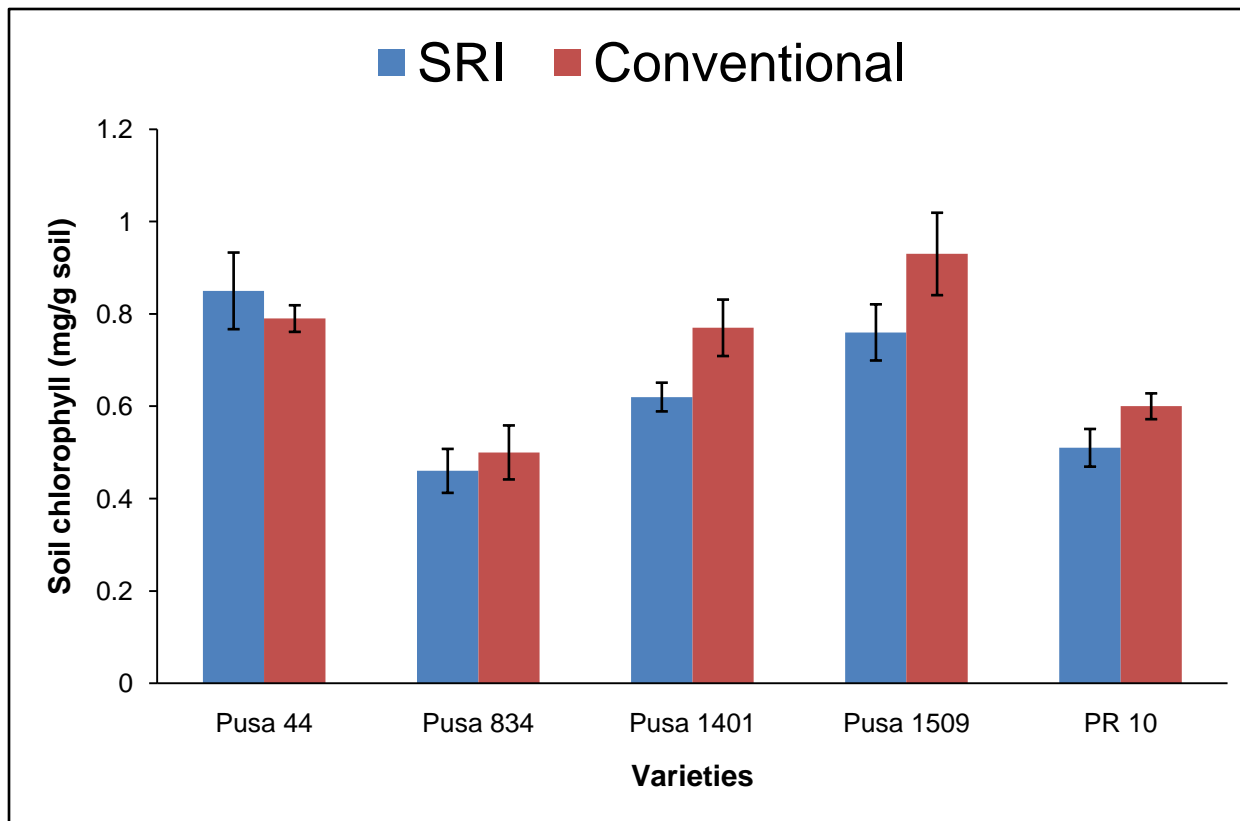

Dehydrogenase enzyme activity is an indicator of biological activity, which strongly increases under anaerobic conditions. This is illustrated in our experiment, wherein higher values are recorded in conventional flooded mode of rice cultivation

Nitrogen fixation is negatively correlated with oxygen levels (as enzyme involved is oxygen-sensitive) and SRI samples showed significantly higher values

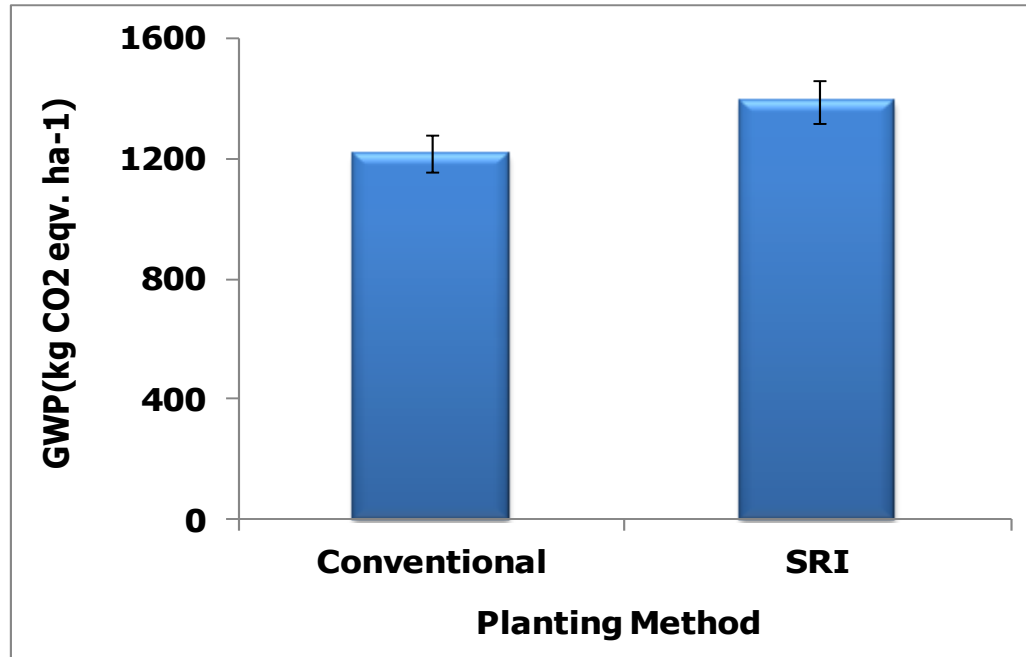

Soil chlorophyll, which represent an index of photosynthetic biomass, which was significantly higher under conventional flooded mode of rice cultivation for all the varieties.

**A significant role of varieties was observed in all the microbiological parameters which can be partially attributed to the variation in the type and amounts of root exudates produced by the different varieties and their influence on the microflora in rhizosphere**

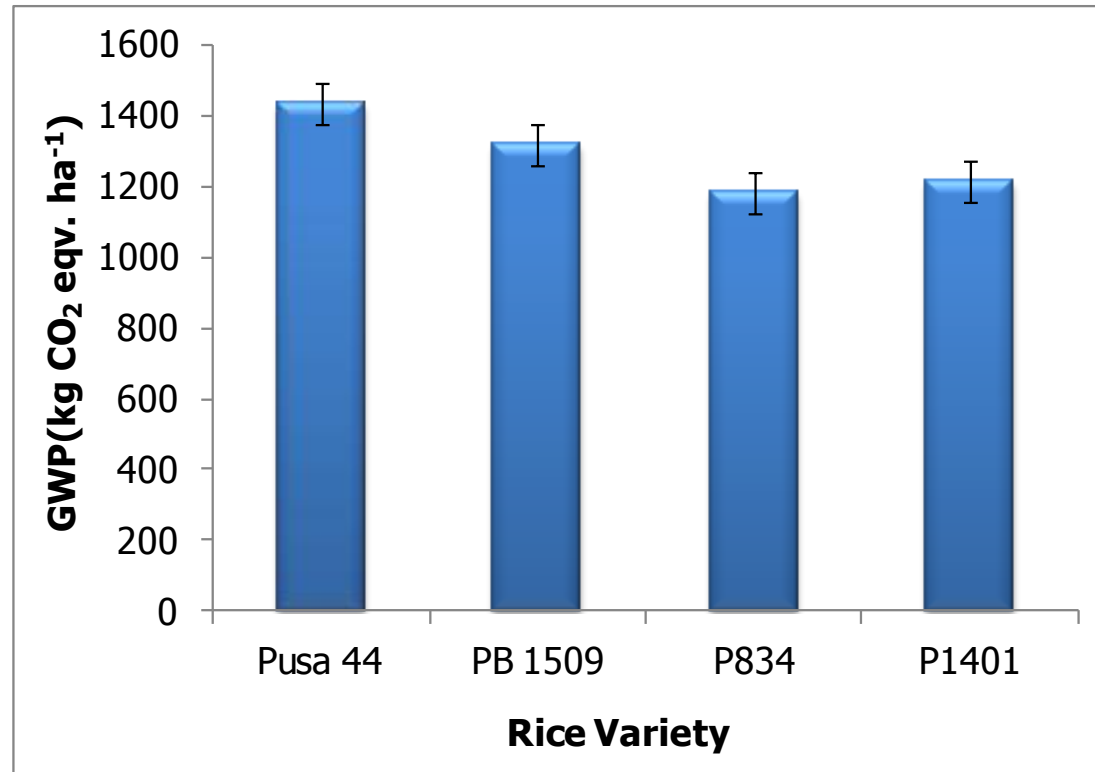

# Global Warming potential of SRI

- **GWP of SRI method was 14% higher in 2013**
- **Methane emission increased by 10% because of anoxic conditions due to abundant rainfall during August and September (628mm) and available carbon from vermi compost**

# Global Warming potential of rice varieties

- No significant difference in N<sub>2</sub>O emission
- Methane emission decreased by 6-20% compared to Pusa 44
- Maximum methane reduction was in Pusa 1509

# Grain Yield (t/ha) of rice varieties grown under different planting methods

| Planting                    | Varieties                    |          |           |           |        |      |
|-----------------------------|------------------------------|----------|-----------|-----------|--------|------|
|                             | Pusa 44                      | Pusa 834 | Pusa 1401 | Pusa 1509 | PRH 10 | Mean |
| Puddled -SRI                | 7.48                         | 6.43     | 6.48      | 6.21      | 7.50   | 6.82 |
| Puddled-transpl.            | 6.81                         | 6.01     | 6.06      | 5.87      | 6.90   | 6.33 |
| Mean                        | 7.14                         | 6.22     | 6.27      | 6.04      | 7.20   | -    |
| Increase in yield under SRI | 0.67                         | 0.42     | 0.42      | 0.34      | 0.60   | -    |
| CD (p=0.05)                 | Planting-0.23; Variety- 0.25 |          |           |           |        |      |

- Amongst varieties, Pusa44 and PR10 gave significantly higher yield than other varieties .
- Yield under SRI was higher than traditional puddled transplanted.

## Water use (cm/ha) / field water use efficiency (kg/ha-cm) of rice varieties under different planting methods

| Variety  | Planting method |             | % water saving over transplanting |
|----------|-----------------|-------------|-----------------------------------|
|          | Puddled Trans.  | Puddled SRI |                                   |
| Pusa44   | 177.9/38.28     | 133.8/55.90 | 25.0                              |
| Pusa834  | 170.6/35.23     | 124.8/51.52 | 27.0                              |
| Pusa1401 | 172.8/35.07     | 126.7/51.14 | 27.0                              |
| Pusa1509 | 170.3/34.47     | 123.5/50.28 | 29.0                              |
| PRH10    | 175.6/39.29     | 130.3/57.56 | 26.0                              |

- SRI system resulted in higher FWUE irrespective of the varieties grown than puddled transplanted.

- There was also a significant saving of water under SRI

# Gross revenue and return

| Gross revenue Rs./ha |        | Return Rs/ha |       | % Diff.  |
|----------------------|--------|--------------|-------|----------|
| CMP                  | SRI    | CMP          | SRI   | over SRI |
